

AMENDMENT TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims.

1 - 14. (Canceled)

15. (Currently amended) A system for enabling the selective use of real-time wireless ~~communication-session~~telephone call control resources in a telecommunications system, comprising:

a subscriber database comprised of individual subscriber account records, each providing data relevant to a respective subscriber account, including at least an account balance;

a balance manager in communication with the subscriber database for receiving real-time data characterizing ~~real-time~~ wireless ~~communication-session~~telephone calls chargeable to a subscriber account, for rating the received real-time wireless ~~communication-session~~telephone call characterizing data according to rating data from the subscriber database, for modifying the respective subscriber account record in the subscriber database on the basis of the rated real-time wireless ~~communication-session~~telephone call characterizing data, and for providing subscriber account record data upon request;

a treatment handler in communication with the balance manager for determining whether a next wireless telephone call chargeable to the respective subscriber account is subject to ~~pre-wireless communication-session~~ wireless telephone call processing before, and real-time monitoring during, the next wireless telephone call, ~~a real-time wireless communication-session~~ or whether the next wireless telephone call chargeable to the subscriber account ~~a subscriber~~ is subject to only post-wireless communication-session monitoring wireless telephone call processing after termination of the next wireless telephone call; and

an event manager in communication with the balance manager and the treatment handler for selectively authorizing a ~~real-time wireless communication-session~~telephone call, as determined by the treatment handler, to be subject to either (i) pre-wireless communication-session wireless telephone call processing before, and real-time monitoring during, the authorized real-time wireless

~~communication session~~telephone call, or (ii) subject to ~~post-wireless communication session~~
~~monitoring only~~ wireless telephone call processing after termination of the wireless telephone call,

wherein the wireless ~~communication session~~ is one of:

~~a wireless telephone call;~~

~~an SMS text message; and~~

~~a data session~~ telephone call characterizing data comprises one or more of:

called party identification data;

calling party identification data;

call direction data;

call start and end times data;

call duration data;

call disposition data; and

call service area data.

16. (Currently amended) The system of claim 15, wherein the subscriber database, balance manager, event manager, and treatment handler are adapted to perform ~~post-wireless communication session~~ wireless telephone call monitoring through receiving real-time wireless ~~communication session~~telephone call-characterizing data by the balance manager subsequent to ~~the real-time-wireless communication session~~telephone call termination, rating the real-time wireless ~~communication session~~telephone call-characterizing data upon receipt at the balance manager, modifying the respective subscriber account record in the subscriber database by the balance manager on the basis of the rated real-time wireless ~~communication session~~telephone call-characterizing data, and subsequently analyzing the modified subscriber account record by the treatment handler.

17. (Currently amended) The system of claim 16, wherein the treatment handler is further adapted to perform ~~post-wireless communication session~~ wireless telephone call processing after termination of the wireless telephone call ~~monitoring~~ through analysis of the modified subscriber

account record with respect to predefined business rules stored in conjunction with the treatment handler.

18. (Currently amended) The system of claim 17, wherein the treatment handler is further adapted to perform ~~post wireless communication session~~ wireless telephone call processing after termination of the wireless telephone call ~~monitoring~~ by determining whether ~~further future real-time wireless communication sessions~~ telephone calls chargeable to the respective subscriber ~~record~~ account are subject to ~~post wireless communication session~~ only wireless telephone call processing after termination of the wireless telephone call ~~monitoring~~—or are subject to ~~pre wireless communication session~~ wireless telephone call processing before, and real-time monitoring during, the wireless telephone call.

19. (Currently amended) The system of claim 15, wherein the subscriber database, balance manager and event manager are adapted to perform ~~pre wireless communication session~~ wireless telephone call processing before, and real-time monitoring during, the wireless telephone call, through the provision of subscriber account record data from the subscriber database to the event manager via the balance manager and the accumulation of real-time wireless ~~communication session~~ telephone call-characterizing data by the event manager during the wireless ~~communication session~~ telephone call.

20. (Currently amended) The system of claim 19, wherein the balance manager and event manager are further adapted to perform ~~pre wireless communication session~~ wireless telephone call processing before, and real-time monitoring during, the wireless telephone call, through the provision of accumulated real-time wireless ~~communication session~~ telephone call-characterizing data from the event manager to the balance manager subsequent to the ~~real-time wireless communication session~~ telephone call.

21. (Currently amended) The system of claim 20, wherein the balance manager and subscriber database are further adapted to rate the real-time wireless ~~communication session~~telephone call-characterizing data upon receipt at the balance manager and to modify the respective subscriber account record in the subscriber database on the basis of the rated real-time wireless ~~communication session~~telephone call-characterizing data for subscribers subject to ~~pre-wireless communication session~~wireless telephone call processing before, and real-time monitoring during, the wireless telephone call.

22. (Currently amended) The system of claim 15, wherein the treatment handler is adapted to determine whether to authorize a subscriber-requested ~~real-time wireless communication session~~telephone call subject to ~~pre-wireless communication session~~wireless telephone call processing before, and real-time monitoring during a ~~real-time wireless communication session~~telephone call, or subject to ~~post-wireless communication session~~only wireless telephone call processing after termination of the wireless telephone call ~~monitoring~~ on the basis of one or more metrics selected from the group consisting of cash balance, credit balance, debt balance, applicable rate plan, home or roaming status, payments due, and credit rating.

23. (Currently amended) The system of claim 15, wherein the treatment handler is further adapted to perform ~~post-wireless communication session~~wireless telephone call ~~monitoring processing after termination of the wireless telephone call~~ through the establishment of a treatment identifier which, when analyzed by the event manager upon receipt of a subsequent ~~real-time wireless communication session~~telephone call initiation request, identifies whether a wireless telephone call chargeable to the respective subscriber account is subject to ~~post-call monitoring only wireless telephone call processing after termination of the wireless telephone call~~ or ~~pre-call wireless telephone call processing before~~, and real-time monitoring during, the wireless telephone call.

24. (Currently amended) The system of claim 15, further comprising a payment portal associated with the balance manager for enabling real-time modification of a subscriber account record.

25. (Currently amended) The system of claim 24, wherein the balance manager is responsive to a modification of a subscriber account record in the subscriber database, initiated by the payment portal, by sending a signal to the treatment handler.

26. (Currently amended) The system of claim 25, wherein the treatment handler is responsive to receipt of the signal from the balance manager by analyzing the modified subscriber account record with respect to predefined business rules stored in conjunction with the treatment handler.

27. (Currently amended) The system of claim 26, wherein the treatment handler analysis of the modified subscriber account record is for determining whether ~~further-future~~ real-time wireless ~~communication-session~~telephone calls chargeable to the respective subscriber account record are subject to ~~post-wireless-communication-session~~only wireless telephone call monitoring-processing after termination of the wireless telephone call or are subject to ~~pre-wireless-communication session~~wireless telephone call processing before, and real-time monitoring during, the wireless telephone call.

28. (Currently amended) The system of claim 15, wherein the treatment handler is further adapted to perform ~~pre-wireless-communication-session~~ wireless telephone call processing before, and real-time monitoring during, the wireless telephone call, through the establishment of a treatment identifier which, when analyzed by the event manager upon receipt of a subsequent ~~real-time-wireless communication-session~~telephone call initiation request, identifies whether a wireless telephone call chargeable to the respective subscriber account is subject to ~~post-call monitoring-only~~ wireless telephone call processing after termination of the call or pre-call-wireless telephone processing before, and real-time monitoring during, the wireless telephone call.

29. (Previously presented) The system of claim 15, further comprising a messaging agent in communication with the treatment handler for the selective delivery of a message to a subscriber.

30. (Currently amended) The system of claim 29, wherein the messaging agent is comprised of a database of predetermined messages selectable by the treatment handler for delivery to a subscriber according to a treatment handler analysis of the respective subscriber account record.

31. (Previously presented) The system of claim 30, wherein the messaging agent is adapted for incorporating data provided by the treatment handler in a selected predetermined message for delivery to a subscriber.

32. (Previously presented) The system of claim 29, wherein the messaging agent is adapted to deliver a message in a medium selected from the group consisting of text, graphics and audio.

33. (Previously presented) The system of claim 29, wherein the messaging agent is adapted to deliver a message immediately upon being instructed by the treatment handler or at a future time.

34. (Currently amended) A method of selectively employing real-time wireless ~~communication session~~telephone call control resources for a subscriber to a telecommunications service plan, comprising:

analyzing data characteristic of a subscriber account record at a treatment handler with respect to predetermined values available thereto for determining if a subsequent subscriber-initiated ~~real-time-wireless communication session~~telephone call is to be subject to ~~pre-wireless communication session~~ wireless telephone call processing before, and real-time monitoring during, the wireless telephone call, or if the subsequent subscriber-initiated ~~real-time-wireless communication session~~telephone call is to be subject to ~~post-wireless communication session monitoring only~~ wireless telephone call processing after termination of the wireless call; and

establishing a treatment identifier reflective of the treatment handler analysis;

receiving a subscriber wireless telephone call initiation request to the telecommunications service plan at an event manager; and

referring to the respective treatment identifier, by the event manager, for determining whether the requested subscriber wireless telephone call is subject to wireless telephone call processing before, and real-time monitoring during, the wireless telephone call, or if the wireless telephone call is subject to only wireless telephone call processing after termination,

wherein if the treatment indicator indicates to the event manager that the wireless telephone call is subject to wireless telephone call processing before, and real-time monitoring during, the wireless telephone call, retrieving data from a respective subscriber account record maintained by a balance manager in an associated subscriber database, by the event manager, for determining if the subscriber record data is sufficient to authorize wireless telephone call initiation, and

~~wherein the wireless communication session is one of:~~

~~a wireless telephone call;~~

~~an SMS text message; and~~

~~a data session.~~

35 and 36. (Canceled)

37. (Currently amended) The method of ~~claim 36~~ claim 34, further comprising the steps of:

authorizing ~~real-time wireless communication session~~ telephone call initiation by the event manager in response to determining the subscriber account record data is sufficient; and

monitoring the ~~real-time wireless communication session~~ telephone call in real-time subsequent to ~~real-time wireless communication session~~ telephone call initiation.

38. (Currently amended) The method of claim 37, further comprising the steps of:

sending real-time wireless ~~communication-session~~telephone call-related data to the balance manager by the event manager subsequent to ~~real-time-wireless communication-session~~telephone call termination;

rating the real-time wireless ~~communication-session~~telephone call-related data by the balance manager; and

updating the respective subscriber account record by the balance manager on the basis of the rated real-time wireless ~~communication-session~~telephone call-related data,

wherein the wireless telephone call-related data comprises one or more of:

called party identification data;

calling party identification data;

call direction data;

call start and end times data;

call duration data;

call disposition data; and

call service area data.

39. (Currently amended) The method of ~~claim 36~~claim 34, further comprising the steps of:

identifying, by the treatment handler, one of a set of predetermined messages associated with a messaging agent; and

instructing, by the treatment handler, the messaging agent to deliver the identified message.

40. (Currently amended) The method of ~~claim 35~~claim 34, further comprising the step of authorizing ~~real-time-wireless communication-session~~telephone call initiation if the treatment indicator indicates to the event manager that the ~~real-time-wireless communication-session~~telephone call is subject to ~~post-wireless communication-session~~only wireless telephone call processing after termination of the wireless telephone callmonitoring.

41. (Currently amended) The method of claim 40, further comprising the steps of:
- sending real-time wireless ~~communication-session~~telephone call-related data to the balance manager by the event manager subsequent to ~~real-time-wireless communication-session~~telephone call termination;
 - rating the real-time wireless ~~communication-session~~telephone call-related data by the balance manager;
 - updating the respective subscriber account record by the balance manager on the basis of the rated real-time wireless ~~communication-session~~telephone call-related data; and
 - indicating to the event manager, by the balance manager, that the respective subscriber account record has been modified.
42. (Currently amended) The method of claim 34, further comprising the steps of:
- receiving a payment from a subscriber at a payment portal associated with the balance manager; and
 - if the subscriber is subject to ~~pre-call-wireless telephone call~~ processing before, and real-time monitoring during, the wireless telephone call, notifying the treatment handler of a change in the subscriber account record.
43. (Currently amended) The method of claim 42, further comprising the steps of:
- re-analyzing data characteristic of the subscriber account record by the treatment handler for determining if a subsequent subscriber-initiated ~~real-time-wireless communication-session~~telephone call is again to be subject to ~~pre-wireless-communication-session~~ wireless telephone call processing before, and real-time monitoring during, the wireless telephone call, or if the subsequent subscriber-initiated ~~real-time-wireless communication-session~~telephone call is to be subject to ~~post-wireless communication-session-monitoring~~ only wireless telephone call processing after termination of the wireless telephone call; and
 - establishing a treatment identifier reflective of the treatment handler re-analysis.
